3.1. MNIST Dataset

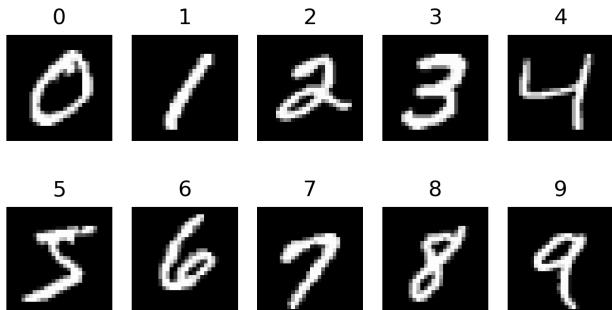

Figure 1. MNIST Dataset [1]

The MNIST dataset is a widely used collection of handwritten digits that is commonly used for training and testing machine learning and computer vision algorithms. MNIST stands for the "Modified National Institute of Standards and Technology" database. It was created by modifying the original NIST dataset, which contained a much larger and more diverse set of handwritten characters, to focus specifically on handwritten digits.

The MNIST dataset contains 28x28-pixel grayscale images of handwritten digits (0 through 9), along with corresponding labels indicating which digit each image represents [1]. There are 60,000 training images and 10,000 testing images in the MNIST dataset, making it a popular benchmark for various image classification tasks.
